Date:

RECOGNIZE A VALID VARIABLE WITH LETTERS AND DIGITS USING LEX AND YACC

AIM:

To recognize a valid variable which starts with a letter followed by any number of letters or digits.

ALGORITHM:

Lex (exp6.l):

- 1. Recognizes letters, digits, any single character, and newline.
- 2. Returns tokens for letters, digits, and single characters.
- 3. Indicates the end of input with yywrap().

Yacc (exp6.y): 1. Includes headers and defines

global variables.

- 2. Declares tokens digit and letter.
- 3. Defines grammar rules for identifiers.
- 4. Handles syntax errors with yyerror().
- 5. The main function, obtain the input, parses it, and prints if it's recognized as an identifier.

PROGRAM: exp6.l:

```
%{
    #include "y.tab.h"
%}
%%
[a-zA-Z_][a-zA-Z_0-9]* return letter;
[0-9]         return digit;
.         return yytext[0];
\n         return 0;
```

Name: Keerthiga K Roll No: 210701120

```
%%
int yywrap(){ return
1;
}
exp6.y:
%{
  #include<stdio.h>
int yylex(); int
yyerror(); int
valid=1;
%}
%token digit letter
%%
start: letter s
     letter
s:
S
   | digit s
   ;
%%
identifier!\n");
Name: Keerthiga K
Roll No: 210701120
```

```
valid=0;
return 0; }
int main() {    printf("\nEnter a name to test for an identifier: ");        yyparse();        if(valid) {
    printf("\nIt is a identifier!\n");
    } }
```

OUTPUT:

```
-(kali⊗kali)-[~/Documents/cdlab]
└$ vi exp6.y
 -(kali@kali)-[~/Documents/cdlab]
s yacc -d exp6.y
 —(kali⊗kali)-[~/Documents/cdlab]
└$ vi exp6.l
 -(kali®kali)-[~/Documents/cdlab]
s lex exp6.l
 —(kali@kali)-[~/Documents/cdlab]
s cc lex.yy.c y.tab.c
 -(kali@kali)-[~/Documents/cdlab]
_s ./a.out
Enter a name to test for an identifier: 1variable
Its not a identifier!
 -(kali@kali)-[~/Documents/cdlab]
Enter a name to test for an identifier: variable1
It is a identifier!
```

RESULT:

Thus, a program using lex and yacc tool is implemented to recognize a valid variable which starts with a letter followed by any number of letters or digits.
